

# Project Profile

## Significant quality of compressed air testing service and upgrade project

BP is one of the world's leading international oil and gas companies. It provides its customers with fuel for transportation, energy for heat and light, lubricants to keep engines moving, and the petrochemical products used to make everyday items as diverse as paints, clothes and packaging.

*"The adi Healy Compressors Services team has a well-deserved reputation for problem solving and providing an excellent service. Their solutions will significantly improve our operating efficiency and risk management of a critical service to one of our key customers. A good ongoing partnership is being developed.."*

### adi Healy Compressor Services provides:

- Self-delivery model that utilises adi employed engineers
- One stop shop for compressors, compressed air systems, parts and service
- Comprehensive consultancy, design and installation service

### The Opportunity

In 2015, adi Healy Compressor Services, as a recognised leader in the quality of compressed air testing, was asked to visit BP's Isle of Grain site to investigate on-going compressed air issues.

BP was so impressed with the team's technical knowledge and approach that we were asked to take over the compressed air service contract at both its the Isle of Grain and Walton on Thames sites

### The Solution

In November 2015, BP asked us to not only provide compressed air services but to also supply and fit a new desiccant dryer at the Walton on Thames site.

This will eliminate moisture and water in the compressed air lines, which could freeze during winter. As the site supplies fuel to both Heathrow and Gatwick airports, this would have serious consequences.

We are also currently reviewing the potential to install a Smartlink monitoring system for the Walton on Thames site.

### The Benefits

- Since joining adi Group in 2011, adi Healy Compressors Services is now a significant contributor to the engineering service provision within the business
- Open and honest working partnership developed.
- Impressive approach to problem solving and risk reduction based on superior technical knowledge.
- Prepared to go above and beyond to provide great customer service.
- One point of contact to manage all adi Group businesses and associated supply chain
