

Milk & Ingredients

Müller is a dairy company with the will to win, the drive to succeed and the ambition to get there. Their facility at Severnside, Gloucester is one of the largest dairy facilities in the UK, employing over 600 people. In late 2015, this facility was purchased by Müller UK & Ireland from Dairy Crest.

“adi Facilities Management has an established track record, based on utilising their industry wide knowledge, skill sets and developing trust through ongoing relationships. Their approach leads to very positive outcomes and excellent customer satisfaction.”

adi Facilities Management provides:

- Modular approach, self-delivery model, customer focussed
- Compliance driven
- Open and transparent costing models

The Opportunity

In early 2015, adi Facilities Management was approached to provide the non-core engineering functions for the Severnside site, including management of the steam boiler; refrigeration facility; water treatment building and maintenance activities

The key for success was to introduce processes and procedures to improve site based regulatory compliance as part of a 2 to 3 year continuous improvement journey, utilising the self-delivery model, with both internal and strategic partners.

The Solution

This type of annual multi-million pound facilities engineering contract is core to the work undertaken by adi Facilities Management. Their customised “fit for purpose” solution was focused on introducing new engineering compliance management processes, better operational efficiency and resource planning, leading to significant cost savings. This approach is enhanced by an ongoing modular maintenance strategy.

Other activities include utilising the skills of other adi Divisions to deliver the electrical, mechanical and compressed air facility improvements. The work commenced in April 2015.

The Benefits

- A customised solution for engineering compliance management which is directly compatible with the customer’s working practices.
- It is a “needs must” rather than a “wish list” approach, that drives out unnecessary costs and inefficiencies.
- Total partnership approach involving other adi Divisions and the management of our external supply chain
- Operational efficiency has also significantly improved, based on introducing a modular maintenance approach
