

Site Separation Works Phase 2: New Link Road

 **Banbury**

 **£1.65m**

 **27 weeks**

Following successful completion of Phase 1 (demolition of existing link building), we were employed by our client to carry out all works to construct a new link road and lorry parking.

This project was completed on a fully live production site and segregation of the works from the client's employees, visitors and production areas was paramount, as was ensuring that their logistics could continue in an efficient manner.

Scope of works included:

- Set up site.
- Modification and re-routing of the site perimeter sprinkler main and connection to the new pumping station and further connection to the town water mains, including all valve and hydrant pits.
- Laying of a new service ducts, 3 for future use and 1 for a new HV cable installation.
- Extending the existing culvert and introducing new drainage, attenuation tanks and separators.
- Construct retaining wall structures, construct ramp and build up and surface all road and lorry parking areas.
- Install street signs, fencing, gates, lorry trailer protection, white lining and external lighting.
