

Phone services and systems

Line Rental

We can provide fixed lines to a better phone service with lower prices.

- Switch to us and save money
- Keep your existing numbers
- Enjoy a faster, better service
- Lines and calls on one monthly bill

How it works

Gone are the days when businesses could only get their telephone lines installed, managed and billed by just one or two companies. You can now pay for your lines and calls on a single bill. You save money and enjoy a faster, better service.

We'll manage the entire process, from ordering and installing to service and billing. You can even keep your existing telephone number.

Take a closer look

Switching to us can save you money against BT business line rental and call rates, and you are still able to keep your existing telephone numbers.

It's all possible because we connect to the state-of-the-art Wholesale Line Rental 3 (WLR3) provisioning system.

This gives us direct access to Openreach's engineering diary, diagnostics tools and line availability checker. As a result, we can provide you with a highly-responsive service.

Benefits

- Save money against BT business line rental and call rates.
- Keep your existing telephone numbers.
- Rapid provisioning and installation process with status reports.
- Simple billing - one monthly bill for all your calls and line rental.
- Temporary lines available for events or unforeseen circumstances

Who is it for?

This highly-responsive service is particularly beneficial to companies that are expanding geographically and are adding new sites.

It's also useful for organisations that are event-driven and need to act quickly, such as the emergency services.

Organisations that need temporary lines for special events such as exhibitions, or alternative locations in case of emergencies can also benefit from our line rental services.

We manage the whole process of ordering, installation, service and ongoing billing. Billing is simple, as you will receive just one monthly bill for all your calls and line rental

We can efficiently pre-qualify orders, transfer and provision lines, check if a number is suitable for transfer to a new address whilst on the phone, arrange analogue installation appointments, conduct tests for analogue line faults and supply you with status reports.
